

Contract Management – often complex, always critical

Many companies struggle with complex contracts and large volumes of legacy agreements that are difficult to analyze.

Intelligent AI Application in Contract Management

Contract management is complex. Contracts impact multiple departments – each with unique challenges. proCONTRACTS AI focuses precisely where AI delivers the greatest value. It analyzes complex contract content, recognizes patterns, and extracts relevant information – quickly, accurately, and without manual input errors. It helps efficiently structure contract data, migrate legacy contracts into a centralized system, and identify risks early. The AI works in a supportive capacity. It handles routine tasks, while legal and strategic decisions remain with the experts.

proCONTRACTS | AI: How the smart CLM Assistant Works

proCONTRACTS AI is your intelligent and extremely fast contract assistant: The solution combines various Microsoft AI technologies built around Microsoft Copilot. The AI analyzes text passages in contracts, identifies risks, and assists with data enrichment. It checks contract content for compliance and analyzes whether clauses align with company policies. Scanned or digital documents are converted into structured data and seamlessly integrated into the CLM system.

proCONTRACTS intelligent CLM system

AI FEATURES

- data quality

Who Uses AI in Contract Management

On average, **25 %** of a company's employees work with contracts. The requirements for a contract management system vary depending on the department. The proCONTRACTS AI agent supports your staff throughout the entire contract lifecycle.

Legal

Identify contract revisions and potential risks early – right in the drafting phase.

Finance & Controlling

AI reviews contract terms against finance-specific KPIs.

Management

AI-driven analysis highlights opportunities and risks at an early stage, enabling more informed decisions.

Sales

Any changes between contract versions are detected instantly, with their implications made immediately visible.

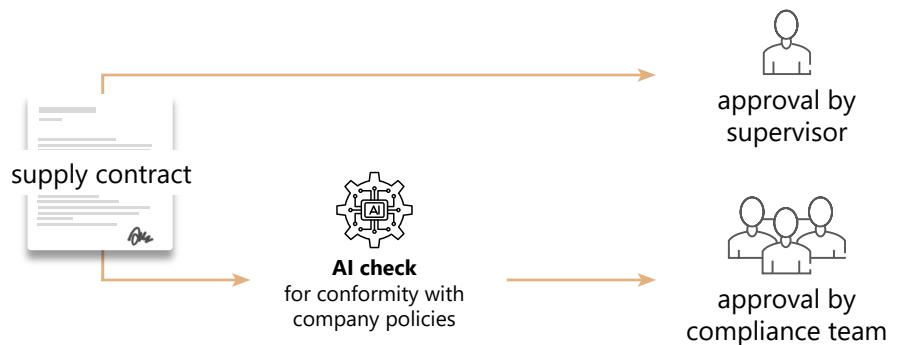

Procurement

The AI checks contracts for compliance and ensures data consistency across the board.

Efficient Contract Review in Procurement – Use Case

A supplier contract is received. The four-eyes principle fundamentally requires approval by the supervisor. If the AI compliance check detects serious violations of company policies, the compliance team must provide additional approval. The established rule automatically manages the process. This ensures everything remains compliant – quickly, precisely, and reliably.

Secure and Responsible AI

proCONTRACTS AI is built on Microsoft Azure OpenAI and Copilot, meeting the highest standards for security and data privacy. This ensures that your company maintains full control over its data as well as its security, compliance, and privacy policies.
